FOR IMMEDIATE RELEASE – JULY 2015

Electronic Design Group Inc (EDG) and Newspaper Solutions, LLC (NSi) were awarded a contract to provide the GPS – Jackson, MS print facility (Clarion-Ledger) to upgrade two NP100 conveyor lines and a dual motor NP630 inserter. The retrofit consists of two NP100 gripper deliveries that feed off the inserter, replacing a servo motor and drive with standard AC equipment and a NP630 inserter with new PLCs and AC drives/motors, formerly DC. This project is to provide more reliable operation moving forward and replacement of obsolete parts. Additional benefits include extensive diagnostics with the addition of touch screens on each piece of equipment and remote support capability 24/7. The project is scheduled for completion by September 2015.

Feel free to contact these plant contacts for further details:
