FOR IMMEDIATE RELEASE

The Plain Dealer To Update Cannon Cart Loaders

Cleveland, OH – November 2016 – Electronic Design Group Inc. (EDG) is pleased to announce their recent contract with The Plain Dealer for the drives replacement on two Cannon Newspaper Cart Loading Systems (CLS).

Each CLS has a servo amplifier, positioning module (Electro-Craft BRU-500~QUIQ), servo motor and resolver that are obsolete. EDG's solution is comprised of the replacement of these components with a PLC and standard AC technology that is readily available. This involves a SAFphire PLC to take the place of the positioning module and an AC drive, AC motor equipped with an encoder for each CLS.

This system comes with full remote support capabilities, a standard feature of all EDG systems. This provides the Customer essentially an extension to their maintenance department 24/7. EDG can connect from anywhere at any time to diagnose issues or assist in troubleshooting. The remote support PC is setup with all programming software, programs and schematics making it readily accessible to the Customer.

ABOUT EDG - Electronic Design Group is a focused team of experts with over 50 years' of Newspaper experience, specializing in automation and drives. EDG is committed to collaborating with clients to develop innovative technical solutions for various industrial applications. More information about EDG is available at www.electronicdesigngroup.ca.
